Question 1

Deploy AI-powered business solutions

A company has had a Microsoft Copilot Studio agent in production for three months, and it has received positive user feedback.

You need to identify the number of questions the agent did not answer and the number of sessions between users and the agent that were abandoned.

Which Copilot Studio insights should you use? Each insight may be used once, more than once, or not at all.

Exam

Blitz

Survival

A company uses Microsoft Copilot Studio agents.

The company plans to deploy custom connectors across development, test, and production environments.

You need to design an application lifecycle management (ALM) process that ensures consistency and prevents direct editing in production.

Which two actions should you include in the design? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

Choose two

A Deploy managed solutions to production.

B Deploy unmanaged solutions to production.

C Manually rebuild the agents in each environment.

D Move the agents between the environments by using data export and import.

E Include agents and connectors in a solution.

jitu.rai

jitu.rai@gmail.com

[Home](#)[Browse](#)[Saved](#)[Learn](#)[Exam](#)[Blitz](#)[Survival](#)**EXPLANATION**

Managed solutions are intended for production deployment and help prevent direct changes to deployed components. Power Platform solutions package components for transport between environments and can include custom connectors; Copilot Studio agents are managed and deployed across environments by using solutions.

Exam

Blitz

Survival

A company uses a Microsoft Copilot Studio agent for customer support.

You are reviewing and validating these prompts:

- A prompt instructing the agent to “help the customer as best you can”
- A prompt that retrieves product information from a knowledge base

You must ensure the agent provides consistent, accurate responses. What should you do for each prompt?

Select

A prompt that has instructions to "help the customer as best you can":

Select...

→ Rewrite the prompt with clear and task-specific instructions.

A prompt that helps retrieve product information from a knowledge base:

Select...

→ Use responses with only reference sources and limit the response scope.

Hide Answer

EXPLANATION

Clear, task-specific instructions reduce ambiguity and make an agent's behavior more consistent. For knowledge-based product information, grounding responses exclusively

Question 4 Plan AI-powered business solutions

A company has Microsoft Foundry agents that generate responses by using Azure OpenAI resources. The agents are deployed in both the United States and Europe.

A company mandate requires that the agents and their grounding data comply with data-residency and data-movement regulations.

You need to recommend a governance solution for the agents.

What should you include in the recommendation?

Question 24 Design AI-powered business solutions[Home](#)[Browse](#)[Saved](#)[Learn](#)[Exam](#)[Blitz](#)[Survival](#)[B Azure Policy](#)[C Azure Monitor](#)[D Microsoft Purview](#)[Hide Answer](#)

EXPLANATION

Microsoft Purview provides data-governance and compliance controls for Microsoft Foundry agents, including data classification, sensitivity labels, data loss prevention, and compliance management for AI interactions. These capabilities help govern grounding data and its regulated handling across regional deployments.

Question 8 Design AI-powered business solutions

A company uses a Microsoft Foundry agent that summarizes customer feedback and suggests products to customers. The agent accesses data from multiple knowledge sources.

Users report slow agent response times.

Telemetry indicates that the agent frequently hits its token-usage limit.

You need to recommend a solution that reduces token usage without reducing the quality of generated responses.

What should you recommend?

- A** Chunk documents during indexing.
- B** Reduce the number of knowledge sources used by the agent.
- C** Reconfigure the prompts to limit the amount of retrieved content from the knowledge sources.
- D** Lower the maximum token usage limit for the responses.

jitu.raii

jitu.raii@gmail.com

[Home](#)[Browse](#)[Saved](#)[Learn](#)[Exam](#)[Blitz](#)[Survival](#)**EXPLANATION**

Chunk documents during indexing so retrieval returns smaller, relevant passages rather than entire or oversized documents. In RAG and agentic retrieval, retrieved passages are included in the model input; appropriate chunking helps meet input-token limits and prevents truncation while retaining relevant grounding content.

Question 11

Design AI-powered business solutions

A company has a Microsoft 365 E5 subscription and uses Microsoft Copilot Studio.

The company has a Microsoft SharePoint Online library that contains 10,000 policy PDFs from various departments. Each PDF has a populated Department column.

Design a Copilot Studio agent that uses the SharePoint library as a knowledge source and meets these requirements:

- Enable the agent to answer user questions about company policies.
- Ensure that the agent can identify the departments and policies that are connected.

What should the design include for each requirement?

Select

Enable the agent to answer questions about company policies:

Select...

→ From Copilot Studio, add SharePoint as a knowledge source.

Identify which departments and policies are connected:

[Home](#)[Browse](#)[Saved](#)[Learn](#)[Exam](#)[Blitz](#)[Survival](#)[Hide Answer](#)

EXPLANATION

Adding SharePoint as a Copilot Studio knowledge source grounds the agent's answers in the policy PDFs. Configuring the SharePoint tool lets the agent query SharePoint content and use the library's Department metadata to connect departments with the relevant policies.

Design end-to-end scenarios to test the agent's ability to:

- Coordinate tasks and data interactions across both Dynamics 365 apps.
- Interpret user input and produce contextually relevant outputs.

Which test scenario and metric should be included in the design?

Select

Test scenario:

Select...

→ Run task-based scenarios that involve both apps.

Metric:

Select...

→ Track the successful completion of cross-app tasks.

Hide Answer

EXPLANATION

End-to-end testing should exercise realistic task flows that span both connected Dynamics 365 applications. The meaningful outcome metric is successful completion of those cross-application tasks, which validates the agent's orchestration, data interaction, and contextual responses.

Question 25 Plan AI-powered business solutions

You are planning an AI strategy for Microsoft Dynamics 365 finance and operations apps and are assessing Microsoft Copilot Studio for in-app help and guidance using generative AI general knowledge.

Recommend which knowledge sources to include in the generative help and guidance agent while minimizing the likelihood of inaccurate responses.

Select

Custom knowledge sources: Select... → Must be uploaded to the agent

AI general knowledge: Select... → Must be disabled for the agent

Hide Answer

Uploaded custom knowledge sources let a Copilot Studio agent use approved, organization-specific content for its responses. AI general knowledge relies on broad public model knowledge; disabling it keeps the agent constrained to curated knowledge sources and reduces the risk of inaccurate or ungrounded responses.
