Question 51 Design AI-powered business solutions

A company processes invoices that are stored in multiple systems and formats.

You need to implement an AI solution to automate invoice processing. The solution must meet the following requirements:

- Automate multi-step invoice-processing tasks, including document analysis, data validation, and approval routing.
- Allow users to interact directly in Microsoft Teams to review and approve invoices.
- Minimize the development effort needed to define and customize approval workflows.

What should you include in the solution?

A Azure Document Intelligence in Foundry Tools and Azure Logic Apps

B a SharePoint agent

C Microsoft Copilot Studio and AI Builder

Saved

Learn

Exam

Blitz

Survival

Hide Answer

EXPLANATION

Microsoft Copilot Studio supports low-code agents and workflows that can automate multistep business processes, include human-review actions, and integrate with Microsoft Teams. AI Builder supplies AI document-processing capabilities for extracting and validating information from documents such as invoices. This combination provides the required Teams interaction, workflow customization, document analysis, validation, and approval routing with minimal custom development.

Question 52 Design AI-powered business solutions

A company has an AI business solution that uses Microsoft Copilot Studio agents.

You need to recommend prompt best practices to improve the effectiveness of agent interactions.

Which two actions should be included in the recommendation? Each correct answer presents part of the solution.

> NOTE: Each correct selection is worth one point.

Choose two

A Track the duration of the average user session.

B Analyze the prompt length distribution.

C Regularly test and refine the prompts based on user input.

D Use clear and specific instructions in the prompts.

E Measure system resource usage during prompt processing.

jitu.rai

Question 74 Deploy AI-powered business solutions

A company has a Microsoft 365 tenant in Canada and several Microsoft Power Platform environments in Canada and the United States.

The company intends to deploy a Microsoft Copilot Studio agent to the Canadian environment that will use:

- Microsoft Dataverse data stored in Canada
- A connector that connects to an Azure OpenAI instance in the United States

You need to ensure that the agent complies with data residency and data-movement policies before deployment.

What should you do?

- A** Ensure that the data processed by Azure OpenAI is stored in the United States.
- B** From the Microsoft Purview portal, validate the Data loss prevention settings.
- C** Migrate the tenant to the United States.
- D** Ensure that cross-region data movement is enabled for the Canadian environment and connector dependencies.

jitu.rai

jitu.rai@gmail.com

Hide Answer

Using Copilot Studio generative AI from an environment outside the United States can move data across regional boundaries when Azure OpenAI processing occurs in another region. The Canadian environment and its connector dependencies must therefore have cross-region data movement enabled before the agent is deployed.

Question 56 Deploy AI-powered business solutions

A company has an AI solution called Solution1 deployed in the production environment. Solution1 uses an Azure OpenAI model to generate marketing emails for existing customers.

During an internal review, you discover that Solution1 generates different emails based on customers' traits.

You need to recommend a bias-mitigation strategy. The strategy must comply with Microsoft responsible AI principles.

What should you recommend?

A Modify Solution1 to randomly generate emails for different traits.

B Modify the system instructions of Solution1.

jitu.rai

jitu.rai@gmail.com

Question 74 Deploy AI-powered business solutions[Home](#)[Browse](#)[Saved](#)[Learn](#)[Exam](#)[Blitz](#)[Survival](#)

D Modify the contents of the training dataset.

[Hide Answer](#)

EXPLANATION

System instructions can steer an Azure OpenAI model's behavior and add explicit safety and fairness constraints. Prompt engineering, including metaprompt or system-message tuning, is an application-level mitigation Microsoft recommends for potential Responsible AI harms; instructions can require consistent treatment of customers and prohibit differential content based on protected or otherwise inappropriate traits.

Question 57

Design AI-powered business solutions

You are designing two Microsoft Copilot Studio agents, Agent1 and Agent2. Each agent must meet these requirements:

- Use a standard model.
- Not use generative orchestration.
- Agent1 must support simple, short phrases for a specified topic.
- Agent2 must integrate with the Microsoft Dynamics 365 Contact Center voice channel.

Recommend a language model for each agent. Each language model can be used once, more than once, or not at all.

Drag & Drop

Azure Language in Foundry Tools

Azure OpenAI

Conversational language understanding (CLU)

Natural language understanding (NLU)

Natural language understanding + (NLU+)

Agent1:

→ Natural language understanding (NLU)

Question 74 [Deploy AI-powered business solutions](#)[Home](#)[Browse](#)[Saved](#)[Learn](#)[Exam](#)[Blitz](#)[Survival](#)[Hide Answer](#)

EXPLANATION

Classic NLU is designed for simpler orchestration and lets makers quickly add 5 to 20 short phrases per topic. NLU+ provides deterministic classic orchestration and is available with Dynamics 365 Contact Center-managed voice or chat channels; for voice-enabled agents, its training data also optimizes speech recognition.

Custom engine agents extend Microsoft 365 Copilot with custom orchestration and calls to external services, including logic hosted in Azure.

Question 61

Design AI-powered business solutions

A company plans to implement an AI business solution for a consumer goods company.

Create agents that meet the following requirements:

- Orchestrate the sales order fulfillment and shipping of goods to customers.

Question 74 Deploy AI-powered business solutions

which type of agent should you use for each requirement? Each agent type may be used once, more than once, or not at all.

Drag & DropAutonomousPrompt-and-responseTask→ Autonomous→ AutonomousHide Answer6

EXPLANATION

Both requirements describe agents that must perceive events, make decisions, and run multi-step workflows without waiting for a user prompt, which is the defining behavior of an Autonomous agent in Copilot Studio. Orchestrating sales-order fulfillment and shipping is a continuous, trigger-driven process spanning multiple systems, so it needs an autonomous agent. Analyzing historical data and trends to replenish stock is a proactive, scheduled/monitoring task (for example an inventory-replenishment agent that forecasts demand and pushes orders to ERP), again autonomous. A prompt-and-response agent only reacts conversationally to user input and cannot drive these background processes.

Question 71

Deploy AI-powered business solutions

Fabrikam, Inc. is a global consumer-goods company undertaking a digital-transformation initiative to migrate all its infrastructure to the Microsoft cloud. As a key part of that migration, it will implement Microsoft Dynamics 365 Sales and move its B2B sales team away from its current proprietary on-premises technologies. Fabrikam will adopt an AI-first approach to its business solutions and implement AI solutions wherever possible to streamline operations.

Its on-premises systems require sales executives to use corporate computers and physical keyboards to access business information during customer interactions. Mobile phones cannot be used because the systems require keyboard input. Consequently, sales executives spend considerable time using keyboards to search multiple separate systems and file servers instead of focusing on customers, which harms the customer experience.

Stakeholders are concerned that users might resist adopting AI. Without adoption, the cost savings will not be achieved, and funding for future AI initiatives depends on showing month-over-month growth in AI adoption. Because the sales team's agent will be Fabrikam's first, rapid adoption is a high priority.

Fabrikam has prioritized AI-driven projects to improve efficiency, customer engagement, and responsible AI adoption. Its current on-premises application infrastructure must move to the cloud to enable these technologies.

**Question 74** Deploy AI-powered business solutions

adoption. Data from the different systems will be consolidated into one common-data-model data source that uses a Microsoft Dataverse environment as the sales team's single source of truth (SSOT).

To improve the sales cycle, Fabrikam plans to:

- Use low-code development to build one AI agent with Dataverse as its core component.
- Ensure sales managers can view unanswered prospect correspondence and intervene when appropriate.
- Replace the proprietary software with Dynamics 365 Sales to track sales cycles and customer interactions.
- Have sales executives use Dynamics 365 Sales to record interactions for open opportunities and send follow-up communications to prospects.
- Have sales executives use hands-free headsets to ask an AI agent questions about internal policies or customer data.

Infrastructure migration requirements are:

- Azure must support all future infrastructure workloads.
- Microsoft-recommended cloud-migration methods must be followed.
- The ROI of every created AI agent must be calculated to confirm that it saves money.

Sales-cycle-enablement requirements are:

Blitz

Survival

jitu.raí

jitu.raí@gmail.com

**Question 74** Deploy AI-powered business solutions

- A designated checklist must be reviewed to verify that the AI agent follows Microsoft's deployment recommendations for a compliant solution.
- Detailed telemetry must be collected for the first AI agent to support troubleshooting and optimization during the initial adoption process.
- Unexpected AI-agent actions must escalate to a live representative. For example, after two unsuccessful attempts to answer a question, the agent must reroute a sales executive to a representative.
- Stakeholders require ROI for changing from the current process to the future process before sign-off.
- The sales team must use Dynamics 365 Sales to correspond with prospects more quickly and efficiently than it does now.
- Sales managers must report AI-agent adoption to key Fabrikam stakeholders every month.
- Sensitive information shared through the AI agent, including user IDs and names, must be tracked for future auditing.

Which framework should be used to satisfy the AI-agent requirements for sales-cycle enablement?

Question 72 Design AI-powered business solutions

A company uses an AI agent to automate reviews of customer feedback held in a cloud database.

You plan to create monthly reports from the agent's output to gain insight into customer sentiment and inform product development and marketing.

You must ensure that the data ingested by the agent is clean and appropriate for its intended use.

What should you do to prepare the data?

A Ensure that the size of the database does not exceed 100 GB.

B Translate the data into a single language.

C Identify and address biased data.

D Sort the database by customer last name.

Hide Answer

Biased feedback data can produce unfair or systematically distorted sentiment insights, which can mislead product-development and marketing decisions. Data preparation should therefore include detecting bias or representation imbalances and taking corrective action to improve fairness and suitability for the AI workload.
