

Act as Azure Copilot expert with Architect AI Solutions for Business Productivity

Architect AI solutions for business productivity

Generative AI Data analytics Data management Data engineering Data integration

Discover how to design and implement AI-powered business solutions using agents, generative AI, and Microsoft Copilot. Gain the skills to analyze requirements and create innovative solutions that enhance productivity and efficiency.

Prerequisites

- Basic understanding of AI concepts
- Familiarity with business process analysis
- Knowledge of Microsoft tools and platforms

All module assessments passed

Introduction to agentic AI business solutions

align AI solutions with business goals and scale AI adoption using Microsoft technologies.

Analyze requirements for AI-powered business solutions

analyze, design, and implement AI-powered business solutions using agents, generative AI, and Microsoft Copilot for productivity.

Design overall AI strategy for business solutions

design an enterprise AI strategy using Azure's Cloud Adoption Framework, aligning AI agent lifecycle with business goals for operational excellence.

Evaluate costs and benefits of AI solutions

assess costs, benefits, and ROI of AI solutions while deciding whether to build, buy, or extend AI components for business processes.

Design AI agents for business solutions

design AI agents tailored to business needs using Dynamics 365 and Copilot.

Design extensibility of AI solutions

design scalable, secure, and customizable AI solutions using Microsoft platforms.

Orchestrate configuration of prebuilt agents and apps

orchestrate, configure, and extend AI-driven experiences in Dynamics 365 and Microsoft 365 Copilot.

Monitor, analyze, and tune AI agents

ensure AI agents operate reliably, deliver high-quality outcomes, and continuously improve in enterprise environments.

Manage testing AI-powered business solutions

validate and maintain AI-powered business solutions with structured testing frameworks, metrics, and governance.

Design ALM process for AI-powered business solutions

design ALM processes for AI solutions, ensuring governance, security, and consistency across environments.

Design responsible AI security, governance, risk management, and compliance design secure, governed, and compliant AI systems that align with organizational policies and Responsible AI principles.

Could you please provide the expected answers of the below questions.

Below Questions:

1. A company has a Microsoft Power Platform environment that contains Microsoft Dataverse data.

You create a Microsoft Copilot Studio agent named Agent1 that processes the Dataverse data.

You discover that Agent1 fails to return relevant or accurate results.

You need to improve the quality and reliability of data grounding.

What should you do?

- A. Retrain Agent1.
- B. Verify and cleanse the Dataverse data.
- C. Use an adaptive card in Agent1.
- D. Add example user inputs to the training data of Agent1.

Expected Result:

2. A company has two Microsoft Power Platform environments named Dev1 and Prod1. A Microsoft Copilot Studio agent named Agent1 is built into a solution in the Dev1 environment.

You plan to deploy Agent1 to Prod1.

You need to make Agent1 available to the users in Prod1. The solution must minimize administrative effort.

What should you do?

- A. Share Agent1 with the users in Prod1.
- B. Export the solution as an unmanaged solution and import the solution into Prod1.
- C. Export the solution as a managed solution and import the solution into Prod1.
- D. Create a new Copilot Studio agent in Prod1 by replicating the configuration of Agent1.

Expected Result:

3. HOTSPOT

You are designing a testing solution for Microsoft Copilot Studio agents. You need to validate prompt engineering best practices to ensure that the agents generate accurate and contextually relevant responses.

Which prompt validation techniques and metrics should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Prompt validation techniques:

- ☒ Exclude domain-specific terminology from the prompts.
- ☒ Use prompts that have varied phrasing.
- ☒ Use only simple, one-word prompts.

Metrics:

- ☒ The number of words generated per response
- ☒ Response relevance and accuracy
- ☒ The response generation time

Expected Result:

4. HOTSPOT

-

A company has a Microsoft Copilot Studio agent for customer support.

You are reviewing and validating the following prompts:

- A prompt that has instructions to "help the customer as best you can"
- A prompt that helps retrieve product information from a knowledge base

You need to ensure that the agent delivers consistent and accurate responses.

What should you do for each prompt? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

A prompt that has instructions to "help the customer as best you can":

- Add filler words to make the prompt more conversational.
- Keep the prompt vague and general.
- Rewrite the prompt with more specific instructions.

A prompt that helps retrieve product information from a knowledge base:

- Add several open-ended questions to the prompt.
- Use responses with only one word or phrase.
- Remove the knowledge base reference from the prompt.

Expected Result:

5. A company has a Microsoft 365 tenant in Canada and multiple Microsoft Power Platform environments in Canada and the United States. The company plans to deploy a Microsoft Copilot Studio agent to the Canadian environment that will use:
- Microsoft Dataverse data stored in Canada
 - A connector that connects to an Azure OpenAI instance in the United States
- You need to ensure that the agent adheres to data residency and data movement policies before being deployed. What should you do?
- A. Ensure that the data processed by Azure OpenAI is stored in the United States.
 - B. From the Microsoft Purview portal, validate the Data loss prevention settings.
 - C. Migrate the tenant to the United States.
 - D. Ensure that cross-region data movement is enabled for the Canadian environment and connector dependencies.

Expected Result:

6. DRAG DROP

-

You are designing end-to-end test scenarios for a business solution that uses Microsoft Dynamics 365 Sales and Dynamics 365 Finance.

You need to ensure that the business solution meets the following test requirements:

- Properly exchanges data between the Dynamics 365 apps
- Aligns with defined user workflows and business processes

Which type of testing should you use for each requirement? To answer, drag the appropriate testing types to the correct requirements. Each testing type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Testing types	Answer Area
Drift	Properly exchanges data between the Dynamics 365 apps ☐
Exploratory	Aligns with defined user workflows and business processes ☐
Integration	
Performance	
User acceptance	

Expected Result:

7. A company plans to deploy an AI-based customer service app that will autonomously manage interactions, escalate complex cases, and learn from historical ticket data.

You need to perform a return on AI investment (ROAI) analysis of the app deployment. The solution must ensure that the analysis is accurate.

What should you do first?

- A. Establish the AI performance metrics.
- B. Conduct an AI market benchmarking study.
- C. Model the customer experience.
- D. Identify and quantify all the development, deployment, and operating costs.

Expected Result:

8. You need to recommend a Microsoft Power Platform business solution that consolidates data from multiple internal and external data sources. The solution must meet the following requirements:

Provide the data as a centralized source for multiple AI systems, including Microsoft Copilot Studio agents, Dynamics 365 applications, and external AI models.

Support built-in data classification and protection policies.

Provide data for grounding and analytics.

What should you include in the recommendation?

- A. Microsoft Dataverse
- B. Azure Data Lake Storage
- C. a Microsoft Power BI semantic model

D. Azure Cosmos DB

Expected Result:

9. A company has a portfolio of AI initiatives at different stages of development. You need to recommend a structured approach to evaluating the return on AI investment (ROAI) across all the initiatives. The solution must balance immediate results with long-term values and strategic innovations. What should you include in the recommendation?

- A. a simple cost and benefit analysis
- B. a horizon-based framework
- C. the internal rate of return (IRR) function
- D. a prioritization grid

Expected Result:

10. A retail company plans to deploy Microsoft Copilot Studio agents to support: Microsoft Dynamics 365 Commerce scenarios. A Microsoft Power Apps inventory management solution. You need to recommend a solution to organize product catalog data as a consistent source for multiple AI systems. What should you recommend?

- A. Let each agent scrape product details from Microsoft SharePoint Online libraries.
- B. Store the product catalog data in a separate custom table for each agent.
- C. Configure prompts to pull product details from the PDFs of external vendors.
- D. Centralize the product catalog data in Microsoft Dataverse and expose the data to both agents.

Expected Result:

11. A company plans to deploy a Microsoft Copilot Studio agent that will analyze historical business data to predict customer behavior. The data is currently stored in an Azure SQL database, flat files, APIs, and logs. You need to organize the data into a format that can be used as a knowledge source in Copilot Studio. What should you include in the solution?

- A. Azure AI Search
- B. Azure Data Lake Storage
- C. Azure Cosmos DB
- D. Azure Translator in Foundry Tools

Expected Result:

12. A financial services company uses Microsoft Dynamics 365 Finance.

Currently, the company's support staff manually reviews customer transaction histories to detect potential fraud cases before escalating the cases.

You need to recommend an automation solution for the review process. The solution must ensure that escalations reach a human analyst for final decision making. What should you recommend?

- A. Deploy an autonomous agent that closes non-fraud cases automatically.
- B. Use Microsoft 365 Copilot in Word to automatically finalize fraud detection policies.
- C. Configure a task agent to generate fraud risk scores for the human analyst to review.
- D. Export the data to a data lake for analysis in Microsoft Power BI.

Expected Result:

13. DRAG DROP -

A company has a Microsoft Foundry project that uses a single agent and a single prompt to complete a series of tasks.

The agent encounters the following issues:

It frequently produces incomplete results.

It struggles with domain-specific reasoning.

Agent response times are remarkably slow.

You need to recommend a solution to improve the overall performance and accuracy of the agent.

What should you include in the recommendation? To answer, drag the appropriate actions to the correct requirements. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Actions

Add a grounding data source.

Add a prebuilt connector.

Move to a multi-agent architecture.

Upgrade to a larger generative AI model.

Answer Area

To improve performance:

To improve accuracy:

Expected Result:

14. HOTSPOT -

You need to design a shared prompt library that will be used across multiple business units. The solution must meet the following requirements:

Ensure consistent AI responses with reusable formats.

Support governance and version control.

Minimize administrative effort.

Minimize ongoing costs.

What should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Ensure consistent AI responses:

Delegate department-specific prompts to business units.

Define standardized prompt templates.

Maintain a prompt history.

Support governance and version control:

Define standardized prompt templates.

Store prompts in a Git repository.

Categorize prompts by business function.

Expected Result:

15. A company has an AI business solution.

You need to extend the solution so that Microsoft 365 Copilot can invoke external logic hosted in Azure services.

What should you include in the solution?

- A. Microsoft Copilot Studio skills
- B. Microsoft Power Platform connectors
- C. custom engine agents

Expected Result:

16. A company uses Microsoft Dynamics 365 finance and operations apps.

The company plans to use Microsoft Copilot in-app help and guidance to generate responses for internal business processes.

You need to add an additional knowledge source for the business processes. The solution must NOT add new topics to the Copilot agent for the finance and operations apps.

Which knowledge source should you add?

- A. Microsoft Dataverse
- B. a public website
- C. Azure AI Search
- D. a file upload

Expected Result:

17. DRAG DROP -

You are designing two Microsoft Copilot Studio agents named Agent1 and Agent2. Each agent must meet the following requirements:

Each agent must use a standard model.

Each agent must NOT use generative orchestration.

Agent1 must support simple and short phrases for a given topic.

Agent2 must integrate with Microsoft Dynamics 365 Contact Center voice channel.

You need to recommend language models for the agents.

What should you recommend for each agent? To answer, drag the appropriate language models to the correct agents. Each language model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Language models

Azure Language in Foundry Tools

Azure OpenAI

Conversational language understanding (CLU)

Natural language understanding (NLU)

Natural language understanding + (NLU+)

Answer Area

Agent1:

Agent2:

Expected Result:

18. A company uses Microsoft Dynamics 365 Sales to manage leads that are stored in a Microsoft Dataverse table named Lead and use non-standard terminology and custom columns.

You need to configure business terms in the Lead table so that Microsoft Copilot controls can summarize the leads efficiently. The solution must minimize administrative effort.

How should you configure the business terms?

- A. Combine all the fields into one custom field.
- B. Map the field display names as business terms.
- C. Add the schema names as business terms.
- D. Create new business terms for each field.

19. Case study -

Any sensitive information, such as user IDs and names, shared via the AI agent must be tracked for future auditing.

Which framework should you use for the infrastructure migration?

- A. Microsoft Cloud Adoption Framework for Azure
- B. Success by Design
- C. Microsoft Power Platform Center of Excellence (CoE)
- D. Microsoft Power Platform Project Setup Wizard

Expected Result:

A. Microsoft Cloud Adoption Framework for Azure

20. Case study -

Any sensitive information, such as user IDs and names, shared via the AI agent must be tracked for future auditing.

Which framework should you use to meet the AI agent requirements for the sales cycle enablement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

For Microsoft Copilot Studio best practices:

the ALM Accelerator for Microsoft
Microsoft Cloud Adoption Frame
Microsoft Power Platform Well-A
Success by Design

For conversational user experiences:

the ALM Accelerator for Microsoft
Microsoft Cloud Adoption Frame
Microsoft Power Platform Well-A
Success by Design

Expected Result:

For Microsoft Copilot studio best practices: **the ALM Accelerator for Microsoft Power Platform.**

For conversational user experiences: **Microsoft Power Platform Well-Architected framework.**

1. Provide the 10 HOTSPOT
2. Provide the 10 Case study
3. Provide the 10 dropdown
4. Provide the 10 generics
5. Provide the yes and No Questions and expected answers with reason.
